

Statement on principal adverse impacts of investment decisions on sustainability factors

Financial market participant: Fideuram Asset Management Ireland (EIIY70MZ51Q4RSX07995)

Summary

Fideuram Asset Management Ireland (EIIY70MZ51Q4RSX07995) – hereinafter “FAMI” or “the Company” – considers principal adverse impacts of its investment decisions on sustainability factors (“**PAI**”). The present statement is the consolidated statement on principal adverse impacts on sustainability factors of Fideuram Asset Management Ireland, approved by the Board of Directors of June 17th, 2026.

This statement on principal adverse impacts on sustainability factors covers the reference period from January 1st to December 31st 2025.

The document aims to describe:

- the principal adverse impacts on sustainability factors, including actions taken, actions planned and targets set for the next reference period;
- policies to identify and prioritize principal adverse impacts on sustainability factors;
- Engagement policies implemented in order to consider principal adverse impacts on sustainability factors;
- to what extent FAMI adheres to responsible business conduct codes and internationally recognized standards for due diligence and reporting.

Description of the principal adverse impacts on sustainability factors

To ensure correct reading of this document, the definition of the terminology used is provided below.

Details of actions taken:

- **Net Zero:** average reduction of carbon emissions, reporting, and engagement (further details in the “References to International Standards” section);
- **Exclusion of issuers exposed to thermal coal:** exclusion of issuers that derive at least 25% of their revenue from extractive activities and electricity production linked to thermal coal. As stated in the “Sustainable and Responsible Investment Policy” for products with an official benchmark, exclusions allow exposure up to the benchmark level;
- **Exclusion of issuers exposed to unconventional extractive activities:** exclusion of issuers that derive at least 10% of their revenue from unconventional oil and gas extractive activities according to the Febelfin definition. As stated in the “Sustainable and Responsible Investment Policy,” for products with an official benchmark, exclusions allow exposure up to the benchmark level;
- **Exclusion of critical issuers:** exclusion of issuers with high exposure to ESG risks or involvement in particularly severe corporate controversies that result in the violation of international treaties or principles such as the UN Global Compact and ILO Core Conventions. As stated in the “Sustainable and Responsible Investment Policy” for products with an official benchmark, exclusions allow exposure up to the benchmark level;
- **Exclusion of issuers involved in the business of weapons of mass destruction:** exclusion of issuers directly involved in the production, maintenance, marketing, and storage of weapons of mass destruction, including nuclear¹, biological, chemical, and radiological weapons. As stated in the “Sustainable and Responsible Investment Policy” for products with an official benchmark, exclusions allow exposure up to the benchmark level;
- **Exclusion of governmental issuers exposed to ESG risk:** exclusion of investments in governmental issuers with high ESG risk exposure, who are lacking in managing environmental, social, and governance risk factors and consequently can negatively impact the long-term welfare and growth of their economies, identified through an ESG rating of “CCC.” As stated in the “Sustainable and Responsible Investment Policy,” for products with an official benchmark, exclusions allow exposure up to the benchmark level;
- **Detection** of the indicator, obtained through calculation and reporting procedures;
- **Due Diligence:** for defining a dedicated universe of third-party asset managers and ESG/SRI funds, their financial analysis is integrated with a Due Diligence process that delves into the investment

¹ with the exception of issuers based in countries that have signed the Treaty on the Non-Proliferation of Nuclear Weapons in July 1968 and entered into force on the 5th of May 1970 but with a maximum revenue of 5% deriving from such activities

policies of individual UCIs, verifying alignment with the PAIs selected by the SGR at the entity level and/or for specific individual products.

Details of actions planned:

- **Review of the scope of the Net Zero initiative:** assessment of the relevant AUM, considering the evolution of the initiative and the reorganization of the Group Private Banking Division and Asset Management Division;
- **Engagement activities within the Nature Action 100 framework:** promoting the engagement activities set by Nature Action 100 initiative.

Relevance intervals for Exposure and Coverage:

For each indicator, exposure is expressed considering all investments as coverage is calculated according to the exposure in relevant asset classes in order to determine the metric under calculation: direct and indirect investments in corporate bonds and equities for PAIs 1-14 of Table 1 and for PAIs of Tables 2 and 3, direct and indirect investments in sovereign bonds for PAIs 15-16 of Table 1.

Criteria used for defining exposure and coverage intervals:

- **Principal:** investments exceeding 70%
 - **Prevalent:** investments between 50% and 70%
 - **Significant:** investments between 30% and 50%
 - **Contained:** investments between 10% and 30%
 - **Residual:** investments below 10%

Human Rights	9. Lack of a human rights policy	Share of investments in entities without a human rights policy	2.29%	2.86%	Exposure in beneficiary companies of investments: prevalent Coverage: principal	<p>Actions taken</p> <ul style="list-style-type: none"> ● Exclusion of critical issuers; ● Detection of the indicator; ● Due Diligence <p>Actions planned and targets set for the next reference period</p> <p>Although it has not set specific objectives, The Company continues its efforts to develop its own Policies, in order to assess the methodologies adopted and evolve them in consideration of best practices.</p>

Description of policies to identify and prioritize principal adverse impacts on sustainability factors

The policy to identify and prioritize principal adverse impacts on sustainability factors has been approved by FAMI Board of Directors as part of the “Sustainable and Responsible Investment Policy” which, at the time of publication of this PAI Statement, was last updated on June 2026.

Regarding the policy for PAIs consideration, the responsibility for implementing the activities has been allocated within organizational procedures and strategies as follows:

Activities	Owner*
<ul style="list-style-type: none"> • Identification and prioritization of PAIs • Set of strategies definition for PAI consideration 	ESG committee (FAMI), supported by ESG & Strategic Activism (Fideuram), Investments (FAMI), Multimanager (EURIZON SLJ, Fideuram), Compliance (FAMI), Risk Management (FAMI)
<ul style="list-style-type: none"> • Definition of calculation methodologies and data aggregation 	ESG committee (FAMI), supported by ESG & Strategic Activism (Fideuram), Risk Management (FAMI), Compliance (FAMI)
<ul style="list-style-type: none"> • Data gathering and periodic collection of data • Calculation of PAI indicators 	ESG committee (FAMI), supported by ESG & Strategic Activism (Fideuram), Risk Management (FAMI), Compliance (FAMI)
<ul style="list-style-type: none"> • Definition of the content of this document, as required from Regulation 2022/1288 • Publication of this document on the website 	ESG committee (FAMI), supported by ESG & Strategic Activism (Fideuram) Operations (FAM), Product development (FAMI) Organization & IT (FAMI)
<ul style="list-style-type: none"> • Review of quarterly PAI data and internal report monitoring 	ESG committee (FAMI), supported by ESG & Strategic Activism (Fideuram), Investments (FAMI), Multimanager (FAM UK), Risk Management (FAMI), Compliance (FAMI)
<ul style="list-style-type: none"> • Monitoring and reporting of actions planned 	Owner and working group composed are defined according to the action planned

* Fideuram (Fideuram Intesa Sanpaolo Private Banking) covers some of the abovementioned activities through a specific service agreement in place with FAMI

In order to better define the Company's actions with respect to the principal adverse impacts deriving from its investment decisions, FAMI has identified the fight against climate change and respect for human rights as priorities among sustainability issues.

These priorities are approved within the Company's governance framework and their implementation is embedded in the organizational structure and internal procedures, with responsibilities allocated across the relevant investment, risk and compliance functions, according to the actions to take in place.

FAMI's methodologies for the identification and prioritisation of principal adverse impacts incorporate an assessment of both the likelihood of occurrence and the severity of such impacts, in line with recognised sustainability-focused market initiatives and internationally recognised standards adopted by FAMI. In particular, adverse impacts associated with sectors or activities characterised by elevated inherent sustainability risks, including thermal coal, unconventional oil and gas and controversial weapons, as well as breaches of international norms, are deemed to present a higher degree of severity and, where applicable, a potentially irremediable character, and are therefore prioritised through the application of exclusion criteria.

The probability of occurrence of such impacts is assessed through the analysis of issuers' exposure to relevant risk factors, including sectoral involvement, ESG risk indicators and controversy screening, supported by external ESG data providers. This combined qualitative and quantitative approach enables FAMI to identify and prioritise those adverse impacts that are both material in nature and more likely to arise, ensuring a consistent and risk-based assessment framework.

Regarding these priorities, FAMI identifies and manages the principal adverse impacts through the application of the exclusion criteria described in Chapter 5 of this policy, analyzing parameters such as:

- the degree of involvement in the mining and production of electricity from thermal coal;
- The degree of involvement in activities related to unconventional oil & gas extraction;
- the degree of involvement in controversial weapons, mass destruction sectors and conventional weapons;
- the presence of critical issues in the conduct of business activities, such as the violation of international treaties or principles;
- exposure to sustainability risks.

In addition, with reference to these adverse impacts, FAMI monitors the entire portfolio on the basis of a series of environmental, social and governance indicators, through the information collected by a specialized info-provider. The most relevant indicators monitored include:

- greenhouse gas emissions;
- greenhouse gas emissions produced with respect to the investee company's revenues or gross domestic product (so-called GHG intensity);
- production and consumption of energy generated from non-renewable sources;
- exposure to companies active in the fossil fuel sector;

- violations of the UN Global Compact principles and Organization for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises;
- exposure to controversial weapons sector;
- unadjusted gender pay gap and Board gender diversity.

The indicators are monitored taking into consideration the list of priorities defined by FAMI from time to time with regard to sustainability factors, as well as the actual availability of the values underlying the calculation of the indicators, which are expected to be increasingly greater as sensitivity to ESG factors increases, due to requests from regulators, investors and stakeholders of all kinds. Environmental indicators will benefit from the portfolio decarbonization commitment targets set following joining the Net Zero Asset Managers Initiative. The results of these surveys are presented to the ESG / SRI Committee which assesses the presence of issuers or investments that exhibit particularly negative performance in terms of adverse impacts on sustainability factors (hereinafter also "PAI"), on which it may decide to initiate:

- specific engagement actions on the issuers concerned, with the aim of guiding them to improve their practices and performance on the sustainability factors for which they have performed negatively;
- specific actions to reduce or dispose of investments, even of a progressive nature, with a high negative impact (including potential) on sustainability factors.

Considering the still limited availability of reliable data on many PAIs, the large variability of PAI data at sectoral and geographical level, as well as their backward-looking nature, no binding threshold or limit has been set to date.

FAMI gathers data from an external info-provider in order to perform PAI calculation.

Methodological details

For each PAI, the published value is obtained as the arithmetic mean of the values calculated from the positions at the end of each quarter (March, June, September, December) of a synthetic portfolio representing the entire Asset under Management of the Company and from the latest available data on the environmental and social impacts of the investments provided by MSCI, an external info-provider specialized in ESG data supply.

In particular, MSCI calculates Principal Adverse Impact indicators in line with SFDR RTS, using issuer-level data aggregated at portfolio level, integrating in its framework environmental, social and governance metrics.

The metrics are based on both company disclosures and proprietary datasets and applying standardized estimation models to ensure data completeness and comparability, where disclosures are not available. Reported and estimated values are combined within a consistent methodological framework across all indicators and data sources are transparently identified through flags distinguishing between "reported" and "estimated" values.

MSCI data quality processes include validation checks, consistency controls and alignment of underlying inputs; further controls address coverage gaps and ensure the reliability of portfolio-level aggregation.

Methodologies are subject to periodic MSCI review and enhancement to reflect regulatory developments.

In order to guarantee methodological cohesion, the value of the PAIs for indirect investments, including for related funds, is provided on an aggregate basis from the info-provider.

The Company pays particular attention to the quality of the data underlying the calculation of the indicators, both by overseeing the data provided by the info-provider, especially regarding the data related to the funds, and by evaluating the use of alternative or supplementary sources.

Although in compliance with the guidelines dictated by the current regulations, for the current year, the following margin of errors could be present:

1. Some indicators require the use of EVIC (Enterprise Value Including Cash) to determine the impact share to be considered. Since data provided by the info-provider regarding investee companies are not always up-to-date, the value of the PAI indicator may present overestimations or underestimations.
2. Some indicators require the calculation of the current value of the investment based on the valuation used in the EVIC calculation, in order to represent the change in the current value of the investment as a change in the number of shares held, thereby neutralizing market effects. Since this data is not always clearly definable (e.g., in the case of expired bonds) or available (e.g., in the case of instruments no longer held), the valuation has been calculated using prices as of the reporting date. Consequently, the value of the PAI indicator may present overestimations or underestimations.
3. In order to comply with the best effort requirement specified by current regulation, where data from the investee companies were not available, estimates made by the info-provider based on internal methodologies were used in the calculation. Consequently, the value of the PAI indicator may present overestimations or underestimations.
4. At the moment, it is not always possible to define a value for derivative instruments at the reporting dates and consequently calculate the value of the PAI indicator for such instruments. As a result, the value of the PAI indicator may present underestimations.

In order to comply with the best effort requirement, the companies who are beneficiaries of the investments and sovereign issuers instruments for which it was not possible to assign an indicator, contributed to the total calculation with the average value (see Historical Comparison section). Consequently, the value of the PAI indicator may present overestimations or underestimations.

The company is constantly committed to evolving the calculation methodology in order to reduce margins of error and refine the calculations in order to make them more representative in compliance with current regulations.

Engagement Policies

With the aim of preventing, containing and managing the main adverse impacts of investment decisions on sustainability factors, FAMI conducts engagement actions - both individual and collective with other investors - and exercises its voting rights on the issuers in its portfolio -, in order to create awareness and orient the issuers' behaviors towards specific sustainability issues, according to the times and methods formalized in its "Engagement Policy" and in the "Strategy for the exercise of the attendance and voting rights attached to the financial instruments held by the UCITS under management". In this case, the Company informs the issuer about the identified criticalities, directing its decisions towards their immediate reduction. If these actions are not addressed in an effective and timely manner by the issuer, the Company evaluates to initiate specific reduction or disposal initiatives, even of a progressive nature, of the investment in these issuers.

The initiatives carried out and the decisions taken regarding these activities are reported and formalized in order to guarantee a thorough traceability of the decision-making processes and outcomes.

References to International Standards

In applying the criteria described in this Policy on principal adverse impacts of its investment decisions on sustainability factors, FAMI is inspired by and considers the main international standards and codes of conduct, some of which have already been mentioned above. Specifically, these include:

Adoption of the Principles of Responsible Investment of the United Nations

Joining the United Nations principles for Responsible Investment (UN PRI) is a natural and essential step in continuing to manage savings, starting from a thorough analysis of the real needs and the risk profile of the customer. UN PRI is an initiative promoted by a group of institutional investors in collaboration with the United Nation Environment Program Finance Initiative (UNEP FI) and the United Nations Global Compact (UNGC), established in 2006 and aimed, through 6 key principles, at promoting sustainable investment globally. By joining the PRI, the Company confirms its dedication to sustainable and responsible investments, and commits to fulfil the 6 principles for responsible Investment:

1. Incorporate ESG issues into investment analysis and decision-making processes
2. Be active owners and incorporate ESG issues into our ownership policies and practices
3. Seek appropriate disclosure on ESG issues by the entities in which we invest
4. Promote acceptance and implementation of the Principles within the investment industry
5. Work together to enhance our effectiveness in implementing the Principles
6. Report on our activities and progress towards implementing the Principles

The European Fund and Asset Management Association (EFAMA) has issued a “Stewardship code” aimed at providing a series of best practices for asset managers to be followed when they engage with the companies in which they invest on behalf of its clients. The Principles are designed to enhance the quality of dialogue with companies and help asset managers create value for their clients by dealing effectively with concerns over a company’s performance and their engagement in relation to an investee company on matters such as:

- Business strategy and its execution;
- Risk management;
- Environmental and social concerns;
- Corporate governance issues such as board composition and the election of independent directors, together with executive remuneration;
- Compliance, culture and ethics;
- Performance and capital structure.

FAMI fully supports the principles of the EFAMA Stewardship Code.

The EFAMA Stewardship Principles are the following:

- Asset managers should have an engagement policy available to the public on whether, and if so how, they exercise their stewardship responsibilities. Where asset managers decide not to develop an engagement policy, they should give a clear and reasoned explanation as to why this is the case;
- Asset managers should monitor their investee companies, in accordance with their engagement policy;
- Asset managers should establish clear guidelines on when and how they will escalate engagement with investee companies to protect and enhance value of their clients’ investments;
- Asset managers should consider acting with other investors, where appropriate, having due regard to applicable rules on acting in concert;
- Asset managers should exercise their voting rights in a considered way;
- Asset managers should disclose the implementation and results of their stewardship and voting activities.

Net Zero Asset Managers Initiative

On 15 October 2021 the Company joined the so-called "Net Zero Asset Managers Initiative" (hereinafter "NZAMI"), the international initiative promoted by asset managers committed to supporting the goal of keeping the increase in the global average temperature in line with the stated goals of the Paris Agreement.

The NZAMI commits to ensure transparency, encouraging the definition climate goals among asset managers consistent with the fiduciary duties and, where applicable, client mandates, fund investment objectives and other legal obligations, through investment in climate solutions, transition finance and climate-resilient investments.

Among the other elements covered, NZAMI Commitment foresees:

- the definition of near-term climate targets consistent with the global goal of net zero greenhouse gas emissions, and review them periodically to reflect evolving financial risks, client expectations, and practices;
- the implementation of investment stewardship strategy to support investees to address material climate risks and opportunities, consistent with the commitment and positive long-term investment outcomes;
- the engagement with key actors in the investment system to encourage the availability of products and services that appropriately reflect climate-related risks and opportunities;
- a publicly disclosed plan for the implementation of the commitments and annual reporting on the actions developed, with details on outcomes achieved.

Institutional Investors Group on Climate Change

To more effectively implement the obligations arising from the signing of the “Net Zero Asset Managers Initiative,” starting from May 2022, the AMC joined the Institutional Investors Group on Climate Change (IIGCC), the European association of investors that promotes collaboration on climate change and the reduction of net greenhouse gas emissions. In this regard, the AMC utilizes the methodological framework developed by IIGCC, called the “Net Zero Investment Framework 1.5°C,” and engages in direct discussions with other participating management companies.

Nature Action 100

In 2023, the AMC joined Nature Action 100, an initiative aimed at addressing the growing loss of nature and biodiversity. In this context, a list of companies, divided into "key" sectors, was presented with which participating institutional investors commit to engaging. In particular, the AMC is committed to aligning with the structural engagement approach proposed in the guidelines related to the Nature Action 100 initiative.

International Standards and Codes of Conduct

Moreover, FAMI adheres to the following standards and codes of conduct:

- the United Nations Principles for Responsible Investment;
- the United Nations Global Compact Principles (PAIs 10-11 of Table 1);
- the OECD Principles of Corporate Governance (PAIs 10-11 of Table 1);
- the OECD Guidelines for multinational enterprises (PAIs 10-11 of Table 1);
- the United Nations Guiding Principles on Business and Human Rights (UNGPs) (PAIs 10-11 of Table 1);
- the ILO fundamental conventions and recommendations (PAIs 10-11 of Table 1);
- the United Nations Conventions against Corruption (UNCAC) (PAIs 10-11 of Table 1);
- the United Nations Sustainable Development Goals (UN SDGs) (across all PAIs of Table 1);
- the greenhouse gas emission reduction targets of the Paris Agreement on climate change (PAI 1-2-3-15 of Table I)

As part of the analyses relating to the assessment of climate risk, FAMI, through the use of the Aladdin Climate model developed and provided by the provider Blackrock Solution, carries out physical and/or

transition risk impact assessments on the financial assessment of the issuer and/or the instrument, through the application of climate scenarios referable to *best practices* international (NGFS, IPCC). The approach adopted is forward-looking and uses differentiated quantitative models for valuations based on the specific characteristics of the issuers.

Historical Comparison

Methodological details

The SGR's commitment to evolving the calculation methodology in order both to improve the representativeness and coverage of the data and to adhere more faithfully to the requirements of current legislation may lead to the introduction of discontinuities in the time series.

Where possible, in particular when the changes were related to the method of aggregation of PAIs, FAMI has recalculated a comparable figure, in order to facilitate a reading as coherent as possible of the historical evolution of the aggregated data reported in the three tables in this section. Further details on the previous methods of aggregation and their evolution are available in the Statements on the principal adverse impacts of investment decisions on sustainability factors published in the year of inclusion of each evolution.

On the other hand, FAMI was not able to re-perform the calculation when the changes concerned the methods of assigning the punctual data of the companies benefiting from the investments and sovereign issuers, which can be published directly by the issuer and acquired by the *info-provider* or calculated by the *info-provider* from data published by the issuer or estimated through proprietary models of the *info-provider*.

PAIs calculated from an indicator calculated or estimated through the *info-provider's* internal model are more subject to modelling evolutions.

With reference to the PAIs in the three tables in this section, the following have benefited from a refinement of the model and/or an extension of coverage:

Between 2022 and 2023, the punctual data underlying PAI 4, PAI 7, PAI 10 and PAI 11;

Between 2023 and 2024, the punctual data underlying PAI 5, PAI 6, PAI 9 and PAI 11;

Between 2024 and 2025, the punctual data underlying PAI 10.

These improvements, if on the one hand have increased the representativeness of the indicators, on the other hand have introduced points of discontinuity in the historical series.

		Indicators applicable to investments in investee companies				
		CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS				
Scope	PAI	Metrica	Impact [year 2025]	Impact [year 2024]	Impact [year 2023]	Impact [year 2022]
Greenhouse gas Emissions	1. GHG emissions	Scope 1 GHG emissions	1,184,939.35 tCO2	1,313,105.37 tCO2	1,278,616.98 tCO2	1,423,938.77 tCO2
		Scope 2 GHG emissions	283,502.17 tCO2	273,868.94 tCO2	276,390.65 tCO2	290,035.71 tCO2
		Scope 3 GHG emissions	9,712,110.04 tCO2	9,681,678.99 tCO2	8,843,316.96 tCO2	10,078,420.39 tCO2
		Total GHG emissions	11,282,102.16 tCO2	11,246,999.96 tCO2	10,388,527.05 tCO2	11,782,277.17 tCO2
	2. Carbon footprint	Carbon footprint	222.16 tCO2/mil€	236.41 tCO2/mil€	253.12 tCO2/mil€	294.18 tCO2/mil€
	3. GHG intensity of investee companies	GHG intensity of investee companies	518.85 tCO2/mil€	521.32 tCO2/mil€	532.94 tCO2/mil€	581.96 tCO2/mil€
	4. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	5.71%	5.40%	5.29%	5.93%
	5. Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	38.88%	38.98%	41.52%	43.66%
6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of	SECTION A - AGRICULTURE, FORESTRY	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€

		investee companies, per high impact climate sector	AND FISHING				
			SECTION B - MINING AND QUARRYING	0.01 GWh/mil€	0.02 GWh/mil€	0.01 GWh/mil€	0.03GWh/mil€
			SECTION C - MANUFACTURING	0.06 GWh/mil€	0.14 GWh/mil€	0.37 GWh/mil€	0.16 GWh/mil€
			SECTION D - ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	0.08 GWh/mil€	0.08 GWh/mil€	0.06 GWh/mil€	0.12 GWh/mil€
			SECTION E - WATER SUPPLY; SEWERAGE, WASTE MANAGEMENT AND REMEDIATION ACTIVITIES	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€
			SECTION F - CONSTRUCTION	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€
			SECTION G - WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES	0.01 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€
			SECTION H - TRANSPORTATION	0.02 GWh/mil€	0.02 GWh/mil€	0.01 GWh/mil€	0.02 GWh/mil€

			AND STORAGE				
			SECTION L - REAL ESTATE ACTIVITIES	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€	0.00 GWh/mil€
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	6.15%	6.00%	5.60%	0.09%	
Water	8. Emission to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.11 t/mil€	0.03 t/mil€	0.03 t/mil€	48.21t/mil€	
Waste	9. Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	1.22 t/mil€	0.86 t/mil€	1.74 t/mil€	2.79t/mil€	
INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS							
Social and employee matters	10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.00%	0.15%	0.21%	0.64%	

	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0.01%	0.57%	0.42%	28.99%
	12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	11.41%	9.54%	8.43%	9.16%
	13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	24.73%	23.69%	22.56%	21.04%
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0.00%	0.00%	0.03%	0.08%
	Indicators applicable to investments in sovereigns and supranationals					
Environmental	15. GHG intensity	GHG intensity of investee countries	68.82 tCO ₂ /Mil€	77.54 tCO ₂ /Mil€	93.20 tCO ₂ /Mil€	102.98tCO ₂ /Mil€

Social	16. Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	9 7.27%	8 6.72%	8 6.74%	7 5.99%
Fossil fuels	17. Exposure to fossil fuels through real estate assets	Share of investments in real estate assets involved in the extraction, storage, transport or manufacture of fossil fuels	N/A	N/A	N/A	N/A
Energy efficiency	18. Exposure to energy-inefficient real estate assets	Share of investments in energy-inefficient real estate assets	N/A	N/A	N/A	N/A
